

West Nile Virus National Surveillance Report English Edition

September 21, 2008 to September 27, 2008 (Week 39)

Canada

Human:

During week 39, no new human cases with West Nile virus (WNV) infection have been reported to the Public Health Agency of Canada (PHAC). As of week 39, a total of thirty-three (33) human WNV clinical cases [Ontario (1), Manitoba (13), Saskatchewan (17), Alberta (1), and British Columbia (1)] and one (1) WNV asymptomatic infection in Quebec have been reported to the PHAC. Of the 33 cases, three (10%) were classified as West Nile Neurological Syndrome, twenty-seven (82%) as West Nile Non-Neurological Syndrome, and three (10%) as unclassified. No deaths have been reported. There have been four travel related cases [Manitoba (1), Saskatchewan (1), Alberta (1), and British Columbia (1)] reported in Canada.

Bird:

As of week 39, a total of 994 dead birds have been tested by the Canadian Cooperative Wildlife Health Centre, of which 146 (15%) were positive for WNV. All 146 positive birds were reported in Ontario. The positive birds were American Crows (85%) and Blue Jays (15%).

Mosquito:

As of week 39, one hundred and thirteen (113) mosquito pools with WNV infection have been identified in Canada [Ontario (53), Manitoba (41) and Saskatchewan (19)].

Domestic Animal:

As of week 39, four horses with WNV infection [Ontario (2), and Saskatchewan (2)] have been reported to the Canadian Food Inspection Agency.

National WNV surveillance data and maps can be found on the PHAC web site at:

<http://www.phac-aspc.gc.ca/wnv-vwn/index.html>

Provinces/Territories: Detailed WNV information can be accessed through the Links section on the PHAC WNV web site.

United States

Human:

As of September 30, 2008, nine hundreds and eighteen (918) human WNV clinical cases and one hundred and sixteen (116) presumptively positive viremic blood donors have been reported to the Centers for Disease Control and Prevention (CDC) in the U.S. Of the 918 cases, 418 (46%) were reported as West Nile meningitis or encephalitis (neuroinvasive disease) and 471 (51%) as West Nile fever, and 29 (3%) were clinical unspecified. Nineteen (19) deaths have been reported.

States: Detailed State information can be accessed through the CDC web site: <http://www.cdc.gov/ncidod/dvbid/westnile/surv&control.htm>

WNV Human Clinical Cases and Asymptomatic Infections, by Province/Territory, by Report week, Canada, 2008

Abbreviations: Newfoundland & Labrador (NL), Prince Edward Island (PE), New Brunswick (NB), Nova Scotia (NS), Quebec (QC), Ontario (ON), Manitoba (MB), Saskatchewan (SK), Alberta (AB), British Columbia (BC), Yukon Territory (YK), Northwest Territories (NT), Nunavut (NU)

¹ Total clinical cases is the sum of both probable and confirmed: WNNS, WN Non-NS and Unclassified / Unspecified

² Likely related to travel outside the province / territory

³ Satisfies West Nile virus diagnostic test criteria IN THE ABSENCE of clinical criteria. This category could include asymptomatic blood donors whose blood is screened using a Nucleic Acid Amplification Test (NAT), by Blood Operators (i.e. Canadian Blood Services or Hema-Quebec) and is subsequently brought to the attention of public health officials. Blood Operators in Canada perform a supplementary WN virus-specific NAT following any positive donor screen test result.

Details on human case definitions can be seen on the PHAC West Nile virus surveillance web site:

http://www.phac-aspc.gc.ca/wnv-vwn/hmncasedef_e.html

⁴ Episode date could include one of the following: symptom onset date, diagnosis date, lab sample date, or reporting date.

⁵ Detailed WNV mosquito surveillance data can be accessed through provincial/territorial web sites.

⁶ These provinces are not conducting mosquito surveillance as part of their WNV surveillance program in 2008.
